(54) Title: CONDITIONALLY BLOCKING REPRODUCTION OF CONTENT ITEMS

(57) Abstract: A reproduction device (200) is arranged to conditionally block the reproduction of a particular content item (324). The reproduction has a unit (202) to obtain a content reference identifier (330) identifying the particular content item (324) and a storage unit (204) for storing the content reference identifier (330). A resolution process regularly checks on the basis of the content reference identifier (330) whether the particular content item is scheduled to be available, e.g. is scheduled for broadcast. When the scheduled broadcast of the particular item has been established, a blocking unit (210) blocks the reproduction device for that scheduled broadcast.
